ARMSTRONG

Design Envelope (Permanent Magnet) 6800G and 6900

Booster Packages

Installation and operating instructions

CONTENTS

Armstrong Design Envelope Boosters are completely factory-assembled, tested, adjusted, and shipped to the job site as integral units ready to receive suction and discharge piping and incoming power supply. These instructions describe the procedures to be followed during installation, commissioning and operation to ensure optimum performance and reliability. When contacting the factory for assistance, please provide the unit Serial Number and other pertinent data, such as motor amperage, voltage and suction and discharge pressures.

A   DESIGN ENVELOPE BOOSTER SYSTEMS INSTALLATION INSTRUCTIONS

Storage - Make sure that all components are kept as clean as possible. Do not remove the crating or plastic wrapping until the unit is ready for installation.

Rotate the pump and motor shaft periodically (at least monthly) to keep rotating element free and bearings fully functional.
Because boosters are tested to design conditions prior to shipment, some water may remain within internal components. Internal rusting can be prevented by removing the plugs at the top of the pump casing and drain or air blow out all water to prevent rust buildup or the possibility of freezing. Be sure to reinstall the plugs when the unit is made operational.

Uncrating - After removal of the unit from the crate, check to see that the equipment is in good order and that all components are received as called for on the packing slip. Any shortages or damage should be reported immediately.

Location - Locate the unit where it is easily accessible for inspection and servicing. Provide adequate room for pump withdrawal and also for access to the interior of the control panel.

As per NEC 110.26, a minimum of 3ft of clearance is required in front of the booster panel. See below diagram for clearance details.**(FIG 1)**

FIG 1: CLEARANCE FOR DESIGN ENVELOPE BOOSTERS

DISTANCE TO ACCESS CONTROLS
PUMP CONTROLLERS ARE NOT REQUIRED TO MEET 110.26(A)(1)

INTEGRAL DISCONNECT SWITCH IN OFF POSITION – STILL ALLOWS LIVE POWER TO CONTROLLER

0.91m(3ft) minimum

2m(6½ FT) headroom clearance

0.76m(30") minimum, or width of control

The standard panel enclosure rating for Design Envelope (Permanent Magnet) boosters is UL Type 4.

Design Envelope models are supplied with either TEFC or ODP motors and drives with UL Type 12 enclosure rating. DEPM models are only available with TEFC motors with IP55 enclosure.

A minimum of 2" (50 mm) clearance is required at the fan inlet to facilitate airflow.

To avoid the DEPM motors from getting overheated, the ambient temperature is not to exceed 113°F (45°C). Operating in higher ambient temperatures will require de-rating of the DEPM motors, as per below

POWER RANGE	DEPM FRAME SIZE	OUTPUT CURRENT AVAILABLE BY % BASED ON AMBIENT TEMPERATURE		
		113°F (45°C)	122°F (50°C)	131°F (55°C)
0 - 3HP (0-2.2KW)	90	100%	100%	100%
5HP (3.7KW)		100%	90%	80%
7.5HP (5.5KW)		100%	80%	60%
0 - 7.5HP (0-5.5KW)	112	100%	100%	100%
10HP (7.5KW)		100%	80%	60%

Foundation - The foundation should be sufficiently substantial to absorb any vibration and to form a permanent rigid support for the base plate. A good concrete foundation should be approximately 2½ times the weight of the packaged unit.

Foundation bolts - Foundation bolts of the proper size should be arranged as shown in the sketch, with a pipe sleeve embedded in the concrete to permit adjustment of the bolts after the concrete has been poured. Use sleeves with a diameter 2½ times the diameter of bolts.

Leveling - When the unit has been placed on its foundation, insert metal wedges approximately 1 thick on either side of the foundation bolts under the base plate. Adjust the wedges until the suction and discharge headers are truly horizontal. Check this by means of a spirit level on the suction and discharge flanges. When leveling is complete, the foundation bolts should be tightened evenly and firmly. Do not over tighten the bolts at this stage.

Piping - Both the suction and discharge pipes should be independently supported so that no strain is imposed on the packaged unit when the pipes are connected. All connecting pipe work should be accurately located-do not attempt to force the suction and discharge pipes into position.

Incoming Supply - The incoming power supply should be brought in through the bottom of the panel adjacent to the main terminals. Note that this is the only electrical connection required at the panel.

Adjustments - The touch display Interface provides access for the adjustable set points, alarms and timers. No other devices require adjustments.

The operation and adjustment procedures for the set points, alarms and timers are described in the manual.

Note carefully, however, that all devices are pre-set at the factory and will normally require no further adjustment.

Automatic operation and Initial Run - To set the unit for automatic operation, turn all the isolating valves to the fully open position, close the main disconnect, ensure all pumps are already in the **AUTO** position, all drives are already in the

Auto On position so go to main screen, put the Remote Start / Local Start switch in Local start position and the booster system will run. If start/stop of the booster is controlled by the remote BAS dry contact switch put the Remote Start / Local Start switch in Remote Start position and close BAS remote switch. **In initial run note any problems (PAGE 8)**.

B   INTELLIGENT VARIABLE SPEED BOOSTER SYSTEMS: BASIC OPERATING FUNCTION

Every Armstrong Intelligent variable speed (Design Envelope including permanent magnet) Packaged system – regardless of size or power rating – incorporates the twelve basic operating functions as follows:

1   For Continuous run and Intermittent systems - Sequential starting and stopping of the pumps is achieved by a combination of pump speed, power and set point pressure. A set point pressure control will bring on a lag pump if the lead pump(s) are operating at full speed and not maintaining set point pressure. When the lead pump reaches 100% speed or maximum motor nameplate power and the system pressure is not being satisfied, the second pump (lag pump) is automatically started. When a lag pump is started up, a time clock in the pump controller keeps it operating for a minimum of a 1 minute period to prevent the pump from cycling on and off. On a three, four or five pump system, the third, fourth and fifth pumps are brought on in the same way when the combined pumps reach 100% speed or maximum motor nameplate power and the system pressure is not being satisfied. A similar sequence of events takes place in reverse on decreasing

demand.

2   Pump RPM is controlled by a Variable Frequency Drive (VFD) connected directly to each individual pump motor on DE models. For DEPM models, pump RPM is controlled by ECM driver integrated into motors. An analog signal from the discharge pressure transmitter is compared to a desired set point entered in to the operator panel. The pump logic controller then instructs the VFD/ECM driver to either speed up or slow down in order to meet or maintain the system set point pressure.

3   A low suction pressure or level shutdown alarm is included with every system to protect the pumps from a loss of suction pressure or water supply. If the water supply pressure, as measured by the suction pressure transmitter falls to 5 psi or the tank level switch (supplied by other) sends a signal to the panel, the pump controller will prevent the pumps from running. This condition is indicated by a **low suction pressure** or **low suction level** alarm description on the control panel alarm page.

4   To protect plumbing the booster come with standard alarm functions for:

- High discharge pressure shutdown
- Low discharge pressure shutdown

5   Should a pump or drive fail to operate, the next pump in sequence starts up automatically.

6   Lead pump status is alternated after every 24 hrs of operation, as a default. The first pump placed in the auto position is considered the lead pump. Hand off-Auto switches are located in the individual pump control screens. Alternation includes all duty and optional standby pumps.

7   No-flow shut down is achieved through drive parameter control and pressure monitoring. Once a no-demand condition is achieved for a period of 5 minute, the controller will increase the pump speed and charge the drawdown tank or system an additional 5 psi before shutting down.

8   In every system restart, once started, the pumps ramp up to meet the required set point pressure.

9   The Soft fill mode is enabled when the booster system is first powered and after any power disruption. Once started, the pumps ramp up slowly from the Soft Fill set point pressure to nominal pressure in a five minute period.

10 The Pressure Setback Mode is enabled as standard. The system pressure set point is reduced linearly, as a percentage, as flow decreases.

11 When the Emergency power mode is enabled upon receiving an Emergency Power digital signal, power and control will be restricted to the lead pump only. The Low system pressure shutdown will be disabled and the

6

Emergency power low system pressure alarm will be enabled. The one pump will operate for the duration of the Emergency power mode and the system will switch to Normal Mode when a signal is not present.

12 Controllers are supplied with 3 analog inputs and 8 digital Normally Open (NO) dry contacts for remote monitoring.

Analog

1, 2 – Discharge pressure transducer

3, 4 – Suction pressure transducer (optional)

5, 6 – Remote pressure transducer (optional)

Digital

7, 8 – Remote start (optional)

9, 10 – Emergency power (optional)

11, 12 – Use alternate setpoint 1 (optional)

13, 14 – Use alternate setpoint 2 (optional)

15, 16 - Use alternate setpoint 3 (optional)

17, 18 - Use aquastat (optional)/
         Alternate setpoint 4 (optional)

19, 20 - Use level switch 1 (optional)/
         Alternate setpoint 5 (optional)

21, 22 - Use level switch 2 (optional)/
         Alternate setpoint 6 (optional)

Communication option
(Serial connection except for BACnet (IP/ENET))

29,30 – BAS communication

GDN – BAS/VFD/DEPM Ground

33,34 - VFD/DEPM communication

D   DESIGN ENVELOPE BOOSTER PACKAGE COMMISSION CHECK SHEET

The following is a step-by-step guide for starting up and commissioning Armstrong Design Envelope (Permanent Magnet) boosters **One check sheet is to be completed per system!** You must follow and fill out all fields below to ensure that all aspects of the booster is checked and set up for proper operation. Once complete, this sheet requires that end-user / general contractor sign off on the work rendered as final approval that the pump is functioning as intended. Please submit this commissioning check sheet along with your work invoice / startup claim in order to ensure prompt and timely payment of work rendered!

NO CHECK SHEET + STARTUP DATA SHEET = INCOMPLETE STARTUP!

UNLESS STATED OTHERWISE ALL FIELDS ARE MANDATORY!

Project name: _____

Building address: _____

Contractor name: _____

Site contact name: _____ Site contact tel. #: _____

Your company: _____ Your name: _____

Pump model: _____ Booster serial #: _____

Pump serial #(s): _____ Sales order #: _____

NOTES:

- ɢᴄ = General Contractor
- ʙᴀꜱ = Building Automation System

PRE-STARTUP PACKAGE:

YES NO N/A

☐ ☐ ☐ Do you have the Booster Order Annexe?

☐ ☐ ☐ Do you have a copy of the electrical wiring diagram?

☐ ☐ ☐ Do you have a copy of the Design Envelope Booster Installation and Operation Manual?

☐ ☐ ☐ ᴏᴘᴛɪᴏɴᴀʟ: Do you have the pump-specific variable speed curve with duty point indicated?

PRE-STARTUP ARRANGEMENTS:

YES NO N/A

☐ ☐ ☐ Verify with ɢᴄ that water and power is available and ready to the pump

☐ ☐ ☐ Verify with ɢᴄ that pumps can be run without damage to system

☐ ☐ ☐ Verify with ɢᴄ that ʙᴀꜱ is wired to Design Envelope Booster controller and ready to go (if applicable)

☐ ☐ ☐ Verify with ɢᴄ that ʙᴀꜱ contractor will be there on site to meet you (if applicable)

BEFORE POWER UP CHECKLIST:

DONE

☐ Check booster installation for proper mounting as per Installation & Operation Manual instructions

☐ Check incoming voltage across the lines and record here: ʟ1 _____ ʟ2 _____ ʟ3 _____
Note: Voltage should be no more than±10% of design voltage

Check if booster set is to be controlled remotely by ʙᴀꜱ start / stop remote contact with ʙᴀꜱ contractor:

☐ **YES:** Check if ʙᴀꜱ remote dry contact is wired across terminals 7 & 8 inside control panel.

☐ **NO**: Move on to the next step.
Note: Contacts close = booster runs. Contacts open = booster stops.

☐ Open up and bleed pump seal flush line to verify no air is locked inside seal / seal lines. If the pumps are Vertical Multi Stage (ᴠᴍꜱ) pumps, make sure the vertical column is bled for air by cracking open the bolt located at the top of the stages.

☐ Record the actual suction pressure from the gauge here: Suction _____
Verify if suction pressure is within range of design suction pressure on Order Annex.

E   BOOSTER PANEL PARAMETER CHECKLIST

Note: When changing the system discharge setpoint press the **Update limits yes** button to automatically update the High and Low pressure limits for the discharge and suction pressure.

Factory adjustable settings

RUNNING:

DONE

☐ Check and make sure all pumps are in the **auto** position (on PLC and VFD, where applicable)

☐ Turn all the isolating valves to the fully open position

☐ Put the Remote Start / Local Start switch in Local Start position and the booster system will run.
If start/stop of the booster is control by the remote BAS dry contact switch put the Remote Start / Local Start switch in Remote Start position and close BAS remote switch.

☐ In initial run check for noise, vibration, etc., and any leaks in the pipework.

☐ Pumps should continue to maintain set point

NO FLOW SHUTDOWN (NFS) TEST:

DONE

☐ Check and make sure all pumps are in the **auto** position (on PLC and VFD, where applicable)

☐ When system is running, isolate booster system from building loop (run it against a deadhead)

☐ Pumps should continue to maintain set point while ramping down and eventually shutting down to one pump only

☐ The single pump after 300s (default) will ramp up to your NFS Pressure Boost setpoint and then shut down

SIGNOFF:

By signing off on this startup checklist, both parties hereby accept that the equipment listed in this checklist has been properly verified to be fully operational and functioning as per the sales order for the equipment listed.

1.0   INTRODUCTION

The integrated controller ʜᴍɪ is divided in three set of screens: Operation, Setup, and Alarm.

The Operation Screens are used by the users to view and control the Pumps. The Setup Screens are used to set, view, save, and restore the system specific settings (i.e. pressure set point and limits, soft fill mode, pumps parameters, etc.). The Alarm screens are used to display the current alarms, store and display history alarms, give helpful information on each alarm.

The list of screens in each set is as follow:

OPERATION SCREENS

- Main menu
- System Overview
- Pump Overview
- Pump 1 Control
- Pump 2 Control
- Pump 3 Control
- Pump 4 Control
- Pump 5 Control
- Login
- Service Overview

The System Screens can be accessed without any password.

ALARM SCREENS

- Alarm
- Alarm and Help
- Alarm History

The Alarm Screens can be accessed and operated (such as pressing a **reset** button) without any password.

SETUP SCREENS

The Setup Screens are divided in three levels. All the three levels have the same number of screens with different level of access. Level 0 setup screens are for viewing only and no adjustment can be made. Level 1 setup screens can be used for changing the system setup, restoring the system factory defaults except for the ᴘɪᴅ parameters in the ᴘɪᴅ Setup Screens. Level 2 setup screens can be used for changing the system setup, and saving and restoring the system factory defaults. To access Level 1 and level 2 Setup Screens an operator need to enter the proper password. Level 2 password is for factory setup.

The list of Setup Screens for every level is as follow:

- Setup Menu
- Booster Setup
- Sensor Setup
- Speed Setup
- Staging Setup
- Pressure Setup
- Pressure Limit Setup
- Soft Fill Setup
- No Flow Shutdown Setup
- ᴘɪᴅ Setup
- Pressure Setback Setup
- Protection Setup
- ʙᴀs Setup
- FieldBus Setup
- Clock Setup

The Level 1 Setup Screens also have a set of **Restore All Default Settings** to restore the default setup values on each screen. The Level 2 Setup Screens have a set of **Restore All Default Settings** and **Save All Default Settings** to restore or save the default values on each screen.

SYSTEM FUNCTIONS

The System functions of the ʜᴍɪ operator interface include the Operator Screens, the Installer Screens, and the Factory Screens. To access the Installer Screens, the user is required a level 1 password. To access the Factory Screens, the user is required a level 2 password. There is no password requirement to access the Operator Screens.

OPERATOR SCREENS

Operator Screens include operation screens, alarm management screens and level 0 setup screens. These screens can be accessed without any password, and level 0 setup screens are for viewing only.

1.1 OPERATION SCREENS

See the following table

1.1.0 MAIN MENU

This is the screen the operator sees when powering up the unit.

1 Press **System Overview** to view the layout of the system, system pressure setpoint, discharge pressure, remote pressure, suction pressure and boost pressure, pumps speed and status.

2 Press **Pump Overview** to view pumps status, speed, run time and alarm.

3 Press **Alarm** to view any alarm condition that might have occurred.

4 Press **Setup** for pump, sensor, pressure, limit and soft fill setup (password protected).

5 Press **Service** to view pumps status, VFD/DEPM motor status, communication,faults and alarms.

6 Press the drop-down list beside **Select Language** to select other display language for all the screens.

7 Any alarm occurred in the system will be displayed in scroll bar in the bottom area.

1.1.1 SYSTEM OVERVIEW
1 The active System pressure setpoint is displayed.

2 Discharge and suction pressure are displayed.

3 Remote pressure is displayed if the remote sensor is enabled in **Sensor Setup** screen.

4 Boost pressure is displayed.

5 Pumps' running status, alarm status, Auto/On/Off/Hand status, duty/standby order and speed are displayed.

6 Pressing the pump icons will change the current screen to the pump control screen.

7 Press the buttons on the menu at the bottom to bring up the desired screen.

1.1.2 PUMP OVERVIEW

PUMP OVERVIEW

	PUMP 1	PUMP 2	PUMP 3	PUMP 4	PUMP 5
Mode	Auto	Auto	Off	Off	Off
Lead	Lag1	Lead	N/A	N/A	N/A
Run	Run	Run	Stop	Stop	Stop
Speed	88.2 % 3175 RPM	88.2 % 3175 RPM	0.0 % 0 RPM	0.0 % 0 RPM	0.0 % 0 RPM
RunHrs	0046	0046	0000	0000	0000
Alarm	OK	OK	OK	OK	OK

Discharge Pressure: 150.0 psi   Lead Switch in: 1 Hrs

MAIN MENU	SYSTEM OVERVIEW	ALARM

1 **Mode** shows pump operation mode: Hand, Off, or Auto.

2 **Lead** shows which pump is lead, lag, or, standby.

3 **Run** shows whether the pump is running or stopped

4 Speed is displayed in both % value of full speed and absolute RPM.

5 Run Hours re displayed and can be reset in the pump control screen.

6 Alarm will be displayed if there is a problem with the pump.

7 Pressing the **Pump 1** button will bring up the **pump 1 control** screen to view and control pump parameters. This applies to the other corresponding pumps.

8 Press the buttons on the menu at the bottom to bring up the desired screen.

1.1.3 PUMP 1 CONTROL SCREEN

PUMP OVERVIEW

PUMP 1 CONTROL   X

HAND	OFF	AUTO	11.3 A 342.6 V 6.1 kW

Auto

Lead:	Lag1
Run:	Run
Run Hours:	0 045
Run Hours:	Reset
Fault:	OK
Alarm:	OK

Ref Feedback

LEAD

Speed 88.2 % 3175 RPM

Hand Speed 0.0 %

MAIN MENU	SYSTEM OVERVIEW	ALARM

This screen is to control the pump, Hand, Off, Auto, Lead or Lag mode and hand speed

1 Press the **Hand**, **Off**, **Auto** buttons to select the desired mode.

2 The pump mode is displayed under these buttons, no display means **N/A**.

3 Press the **Lead** button to set the pump as lead pump (the other pumps become lag).

4 When in **Hand** mode, enter the desired speed in the **Hand Speed** box.

5 When in **Auto** mode, the speed of the pump is automatically determined by the PLC controller.

6 Pump duty is displayed: Lead, Lag1, Lag2, Lag3, Lag4, or Standby.

7 Pump status is displayed (Run or Stop).

8 Run Hours indicates the pump total running time since the last reset and can be reset by pressing the **Reset** button.

9 Drive fault will be displayed if there is a problem with the VFD/DEPM motor, otherwise it will display **Ok**.

10 Alarm will be displayed if there is a problem with the pump, otherwise it will display **Ok**.

11 Controller output speed (Reference speed sent to the VFD/ECM driver) is displayed in % value of pump full speed

12 Pump actual speed (Feedback from the VFD/ECM driver) is displayed in % value of pump full speed and RPM.

13 VFD/DEPM motor amps, voltage and power are displayed.

14 Press the buttons on the menu at the bottom to bring up the desired screen.

1.1.4 LOGIN SCREEN
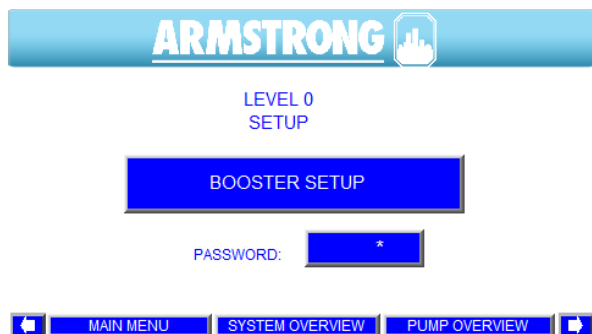

1 From the **Main Menu** screen, pressing the **Setup** button will call up this screen.

2 In order to be able to modify any of the Setup parameters you must Login with the proper password.

3 There are 3 levels of setup screens. Level 1 and level 2 require operator to input password. Level 0 will allow viewing the setup values only. Level 1 will allow changes to setup values and to restore the system factory defaults except for the PID parameters. Level 2 will allow changes to all the setup values, and to save or restore all the system factory defaults. All the three levels will allow controlling the pumps.

4 Pressing the password area to the right of **Log In:** will pop-up this keypad. Inputting the password through the keypad, then pressing the **Ent** button on the keypad will change the appropriate level. Pressing the **Booster Setup** button allows the user to change or view parameters.

1.1.5 MAIN SERVICE SCREEN
1 The service contact screen displays the Armstrong Website where the user can access to attain the local service support information.

2 This screen allows access to the Service Overview, Commission, Energy, Flow, and Hide System Bar

1.1.6 SERVICE OVERVIEW SCREEN

1 **Drive** means ᴠꜰᴅ or ᴅᴇᴘᴍ motor.

2 **A** is the actual pump motor current.

3 **V** is the actual pump motor voltage.

4 **kW** is the actual pump motor power.

5 **Speed%** is the actual motor speed (ᴏ-1ᴏᴏ.ᴏ%).

6 ʀᴘᴍ is the actual revolutions per minute of the motor.

7 **Run** shows whether the pump motor is running or stopped.

8 **Fault** is the fault status of the ᴠꜰᴅ/ᴅᴇᴘᴍ motor and can either be Oᴋ or Fault.

9 **Hand Auto** is the current auto status of the ᴠꜰᴅ/ᴇᴄᴍ drive and can either be Auto or Hand.

10 **Lead** is displayed as Lead, Lag1 to Lag4, or Standby

11 **Mode** is either Hand, Off, or Auto.

12 The **Message** of **Modbus Communication** is the current Modbus communication status between ᴘʟᴄ and ᴠꜰᴅ/ᴇᴄᴍ drive. It can either be: Invalid Request / Timeout / Oᴋ / Illegal Faction / Illegal Address / Illegal Value / Slave Failure / Acknowledge / Slave Busy.

13 The **Alarm** of **Modbus Communication** is the current Modbus communication alarm status of the ᴠꜰᴅ/ᴅᴇᴘᴍ motor and can be Oᴋ or Fault.

14 The Suction Pressure is displayed.

15 The Boost Pressure is displayed.

16 The Setpoint (System Discharge Pressure) is displayed.

17 The Active SP (Active Discharge Setpoint) is displayed.

18 The (Local) Discharge Pressure is displayed.

19 The Remote Discharge Pressure is displayed if the remote sensor is enabled.

1.1.7 COMMISSION SCREEN

1 Where if **Commission mode off/on** switch is in **Commission mode on** position it disables the no flow shutdown and the pressure setback mode. The commission mode is active for only 24 hours. The commission mode is used for testing an ɪᴠs Booster system in case of not occupy building with no flow in it.

1.2   ALARM MANAGEMENT SCREENS

See the following table

1.2.1   ALARMS SCREEN
1 All alarms will be displayed in chronological order.

2 The last alarm will be at the top of the screen.

3 Press **diagnose** to pop up the PLC DIAGNOSTIC box.

4 Press **alarm reset** to reset all active alarms.

5 Press the up and down arrow buttons to view more alarms.

6 Press the **alarm & help** button to bring up the Alarm and Help screen.

7 Press the **alarm history** button to bring up the Alarm History screen.

8 Press the buttons on the menu at the bottom to bring up the desired screen.

1.2.2   ALARM & HELP SCREEN
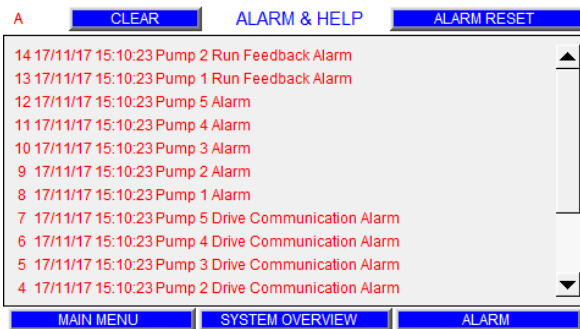

1 The alarms saved in the internal memory of the HMI are displayed.

2 Pressing the alarm displayed will bring up the Alarm Information screen.

3 Press the **clear** and history of alarms in the internal memory of the HMI will be cleared.

4 Press ALARM RESET to clear the current alarm and enable the booster to restart.

5 Press the up and down arrow buttons to view more alarms.

6 Press the buttons on the menu at the bottom to bring up the desired screen.

1.2.3   ALARM INFORMATION SCREEN
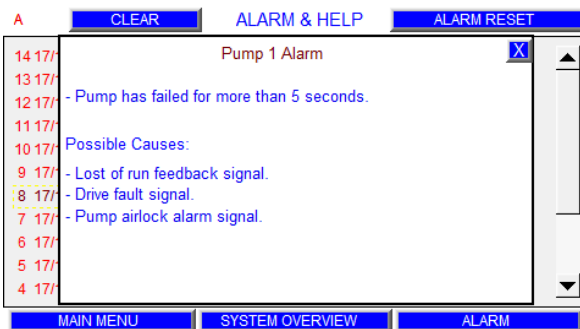

1 Press any alarm in Alarm & Help screen will pop up a corresponding alarm information box.

2 The alarm description, the possible cause of alarm and the remedy for this alarm will be displayed in the alarm information box.

3 Press the upper right cross button to close this box.

1.2.4 ALARM HISTORY SCREEN
1. The history alarms saved in the internal memory of the HMI are displayed.

2. Press the top-right button (black arrow) to select the history alarm to display. The selected number indicates the number of days before today. The history alarms will be displayed for that day.

3. Press the up and down arrow buttons to view more alarms.

4. Press the left and right arrow buttons to view more content of alarms.

5. Press the buttons on the menu at the bottom to bring up the desired screen.
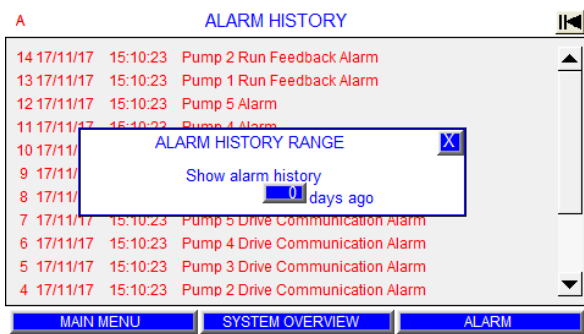

1.3 LEVEL 0 SETUP SCREENS

See the following table

1.3.0 LEVEL 0 SETUP MENU
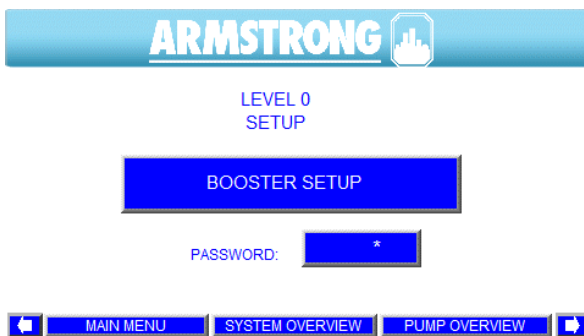

1. Touching the **setup** button from **Main Menu** will call up the Level 0 Setup screen.

2. Pressing the password area will pop-up a keypad to log on to installer screens or factory screens.

3. The top left corner of the screen will flash **A** when there is a new alarm. The **A** will be solid when the alarm is acknowledged or muted. Pressing the **A** will call up the alarm screen.

4. Pressing the **booster setup** button will call up its the first Setup display.

5. Touching the **Right** and **Left** arrow will navigate between the viewing only Setup Screens

6. These screens are for viewing only. No values can be modified on these screens.

7. Below are the screens that the user sees when pressing on each of those buttons.

8. Touch the buttons on the menu at the bottom to bring up the desired screen.

◄ | MAIN MENU | SYSTEM OVERVIEW | SETUP | ►

1 From **Level 1 Main Setup** toggle left or right to call up this screen.

2 Enter the local discharge pressure setpoint or local system pressure setpoint in the box beside the **Local Setpoint**.

3 Enter the remote discharge pressure setpoint in the box beside the **Remote Setpoint**.

4 Pressing the button beside the description of **Choose control sensor** will toggle between **Local** and **Remote**. If **Local** is selected, the discharge pressure sensor will be the control sensor. If **Remote** is selected, the remote pressure sensor will be the control sensor.

5 After input the setpoints, press **Auto set** button to automatically update the High and Low pressure limits for the discharge and suction pressure according to the pressure setpoint entered.

6 Press the **Restore** button to retrieve pressure setup values from the system factory defaults.

7 Touching the **Alternate Discharge Pressure Setup** button to call up the Alternate Discharge Pressure Setup screen.

8 Enter the Number of Setpoints. System Discharge Pressure Setpoints will popup accordingly.

9 Enter the Setpoint in the corresponding box beside the description. If an Alternate Setpoint Switch from 1 to 6 is closed, then the corresponding Alternate Discharge Pressure Setpoint is used instead of Local or Remote Pressure Setpoint.

10 Touch the buttons on the menu at the bottom to bring up the desired screen.

2.1.4 PRESSURE LIMIT SETUP 1

PRESSURE LIMIT SETUP 1

High suction pressure: 150.00 psi Enabled

Low suction pressure: 5.00 psi

High discharge pressure: 165.00 psi Enabled
High Alarm Delay: 10 sec
High Alarm Reset: Auto

Low discharge pressure: 102.00 psi
Default Settings: RESTORE

◄ MAIN MENU SYSTEM OVERVIEW SETUP ►

1 From **Level 1 Main Setup** toggle left or right to call up this screen.

2 Enter high suction pressure alarm/shutdown limit by pressing the left box beside the description. By pressing the right box, this function can be enabled or disabled.

3 Enter low suction pressure alarm/shutdown limit by pressing the box beside the description (Enter zero for disabling it).

4 Enter high discharge pressure alarm/shutdown limit by pressing the left box beside the description. By pressing the right box, this function can be enabled or disabled.

5 Enter the High Alarm Delay by pressing the left box beside it. If the High discharge pressure setpoint is exceeded for more than the High Alarm Delay time, a alarm is given.

6 High Alarm reset can be set in Auto or Manual Mode. In Auto mode, if at anytime, the pressure falls 5 psi below the High discharge pressure setpoint, the alarm will be disabled. In Manual mode, the Alarm must be manually reset to restart the booster.

7 Enter low discharge pressure alarm/shutdown limit in normal mode by pressing the box beside the description (Enter zero for disabling it).

8 Press **Restore** button to retrieve pressure limit setup values from the system factory defaults.

9 Touch the buttons on the menu at the bottom to bring up the desired screen

2.1.5 PRESSURE LIMIT SETUP 2
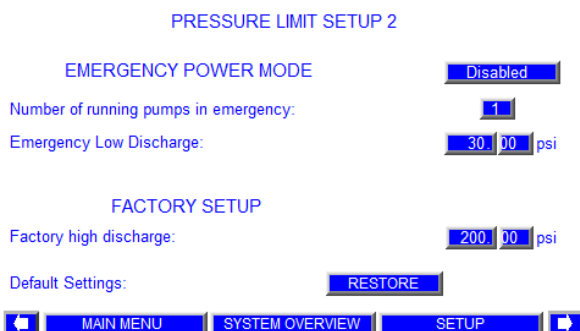

PRESSURE LIMIT SETUP 2

EMERGENCY POWER MODE Disabled

Number of running pumps in emergency: 1
Emergency Low Discharge: 30.00 psi

FACTORY SETUP
Factory high discharge: 200.00 psi

Default Settings: RESTORE

◄ MAIN MENU SYSTEM OVERVIEW SETUP ►

1 Emergency power mode can be enabled or disabled here by pressing the box beside the description. If it's enabled, when Emergency Power occurs, the **Number of running pumps in emergency** is designated to operate. The regular **Low discharge pressure** value will be disabled and the **Emergency Low Discharge** pressure value will apply

2 Enter the Number of Pumps in Emergency power mode. Default is 1

3 Enter low discharge pressure alarm/shutdown limit in emergency power mode by pressing the box beside the description.

4 Factory high discharge pressure alarm / shutdown limit is displayed.

5 Press **Restore** button to retrieve pressure limit setup values from the system factory defaults.

6 Touch the buttons on the menu at the bottom to bring up the desired screen.

2.1.6 STAGING SETUP

PUMP STAGING SETUP

Stage on speed:	97.0 %
Stage off by:	Speed or Power
Stage off speed:	70.0 %
Stage off power:	90.0 %
Stage on delay:	5 sec
Stage off delay:	30 sec
Default Settings:	RESTORE

◄ | MAIN MENU | SYSTEM OVERVIEW | SETUP | ►

1 From **Level 1 Main Setup** toggle left or right to call up this screen.

2 Enter pump Stage on speed for all the Lag pumps in the boxes beside the description. When the speed of lead pump reaches the corresponding speed entered above for a time as specified in Stage on delay, the next lag pump will be staged up.

3 Press the pump Stage off by selector box to toggle between **Speed**, **Power**, **Speed or Power** and **Speed and Power**. Default is **Speed or Power**.

4 Enter pump Stage off speed for all the lag pumps beside the description.

5 Enter pump Stage off power for all the lag pumps beside the description.

6 The program switches off a pump, after the Stage Off Delay time if the pumps speed is less than the Stage Off Speed and/ or disconnection of one pump will cause the remaining pump(s) power to be less than the Pump(s) Stage Off Power. The speed or power condition also can be disabled. (The stage off selector settings: Speed, Power, Speed or Power, Speed and Power.)

7 Enter the delay time for staging on and staging off in the Stage off delay field.

8 The **Restore** button retrieves staging setup values from the system factory defaults, only if needed.

9 Touch the buttons on the menu at the bottom to bring up the desired screen.
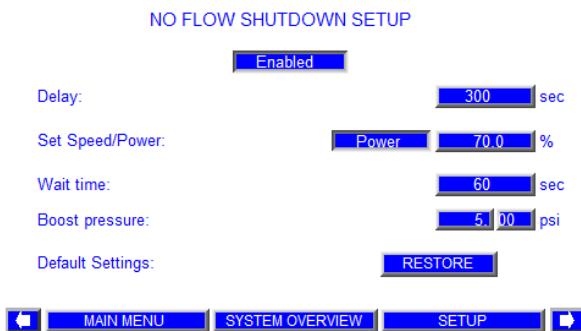

2.1.7 SOFT FILL SETUP

SOFT FILL SETUP

Enabled

Start setpoint:	50.0 %
Run setpoint:	65.0 %
Ramp:	60 sec
Default Settings:	RESTORE

◄ | MAIN MENU | SYSTEM OVERVIEW | SETUP | ►

1 From **Level 1 Main Setup** toggle left or right to call up this screen.

2 Soft Fill mode can be enabled or disabled by pressing the box beside the description. When the booster is powered up, the lead pump starts. The System Discharge Pressure Setpoint increases in a linear ramp, starting at the Soft Fill Start Pressure Setpoint or Discharge Pressure Setpoint (whichever is higher) at a rate of (Discharge Pressure Setpoint - Soft Fill Start Pressure Setpoint) / Soft Fill Ramp Time, until the pressure reaches the System Pressure Setpoint or the Pressure Setback Setpoint (if Pressure Setback Mode is enabled), then the booster switches to Normal Mode. Soft Fill also starts at any point during normal operation, if the pressure drops down to or below Soft Fill Run Setpoint value.

3 Enter Soft Fill Start Setpoint percent in the box beside the description. This is a percent of Discharge Pressure Setpoint.

4 Enter Soft Fill Run Setpoint percent in the box beside the description. This is a percent of Discharge Pressure Setpoint.

5 Enter soft fill ramp time in the box beside the description.

6 The Restore button retrieves soft fill setup values from the system factory defaults, only if needed.

7 Touch the buttons on the menu at the bottom to bring up the desired screen.

2.1.8 NO FLOW SHUTDOWN SETUP

NO FLOW SHUTDOWN SETUP

Enabled

Delay:	300	sec
Set Speed/Power:	Power 70.0	%
Wait time:	60	sec
Boost pressure:	5.00	psi
Default Settings:	RESTORE	

MAIN MENU   SYSTEM OVERVIEW   SETUP

1 From **Level 1 Main Setup** toggle left or right to call up this screen.

2 No flow shutdown can be enabled or disabled by pressing the box beside the description. This feature allows the booster to be shutdown when there is no flow demand.

3 Enter the no flow shutdown delay in the box beside the description. This is the delay time to check if the discharge pressure changes less than 2 psi or equivalent (no flow condition) after the power/speed of lead pump is lower than **Lead pump No Flow shutdown power/speed setpoint** entered in the Set Speed/Power field.

4 Enter Lead pump No Flow shutdown power/speed setpoint in the box beside the Set Speed/Power. This is the pump power/speed when only lead pump is running to start to check the no flow condition.

5 Enter the No Flow shutdown wait time in the box beside the Wait time description. This is the wait time to check if the discharge pressure changes less than 2 psi or equivalent (no flow confirmation) after the speed of lead pump is reduced 5% when the power/speed condition is met.

6 Enter No Flow boost pressure in the box beside the Boost Pressure description. This is added pressure to the pressure setpoint for 2 minutes before the booster is shutdown. After the booster is shutdown, the lead pump should be started when the discharge pressure drops 5 psi or equivalent below the pressure setpoint.

7 The **Restore** button retrieves no flow shutdown setup values from the system factory defaults, only if needed.

8 Touch the buttons on the menu at the bottom to bring up the desired screen.

2.1.9 SPEED SETUP

SPEED SETUP

Minimum:	40.0	%
Maximum:	100.0	%
Start Speed:	60.0	%
Default speed:	70.0	%
Motor Rated RPM:	3600	RPM
Default Settings:	RESTORE	

◀	MAIN MENU	SYSTEM OVERVIEW	SETUP ▶

1 Enter the minimum pump speed setpoint in the box beside the description.

2 Enter the maximum pump speed setpoint in the box beside the description.

3 Enter the start pump speed setpoint in the box beside the description.

4 Enter the default pump speed setpoint in the box beside the description. This is the default pump speed when the discharge pressure sensor fails and the aquastat sensor (enabled) is closed.

5 Enter the rated rpm pump setpoint in the box beside the description.

6 The Restore button retrieves speed setup values from the system factory defaults, only if needed.

7 Touch the buttons on the menu at the bottom to bring up the desired screen.

2.1.11 PRESSURE SETBACK SETUP

PRESSURE SETBACK SETUP

Enabled

Setpoint: 85.0 %

Control mode: Quadratic

Default Settings: RESTORE

MAIN MENU | SYSTEM OVERVIEW | SETUP

1 From **Level 1 Main Setup** toggle left or right to call up this screen.
2 Pressure setback mode can be enabled or disabled by pressing the box beside the description
3 Enter the pressure setback setpoint in the box beside the Setpoint description. This is a percentage of the system pressure setpoint. This feature will decrease the system pressure setpoint relative to the pumps' power. When the pumps consume no power, the pressure setpoint reduces to this percent value. When all the pumps run at their rated power, the pressure setpoint is the value inputted in the pressure setup screen. The pressure setpoint will increase linearly or quadraticaly from this percent value to 100% when the pumps' power increase from 0 to the total rated power.
4 Press the button beside the Control Mode description to toggle between **Linear** and **Quadratic**. It enables Linear or Quadratic pressure control for pressure setback function.
5 The **Restore** button retrieves pressure setback setup values from the system factory defaults, only if needed.
6 Touch the buttons on the menu at the bottom to bring up the desired screen.

2.1.12 PROTECTION SETUP

PROTECTION SETUP

MAIN MENU | SYSTEM OVERVIEW | SETUP

1 From **Level 1 Main Setup** toggle left or right to call up this screen.
2 End of Curve protection can be enabled or disabled by pressing the box beside the description.
3 Enter the End of Curve Head (EOC Head). This is the full speed EOC head in percent of design head.
4 If an Aquastat switch is installed then Aquastat protection can be enabled or disabled by pressing the box beside the description. All pumps will stop running if the aquastat switch is open and the Aquastat alarm message will be displayed.
5 Airlock pump shutdown protection can be enabled or disabled by pressing the box beside the description.
6 Enter airlock shutdown power setpoint (percent of nominal power) in the box beside the description. When any pump speed is faster than 50% and the power it consumes is less than the airlock power shutdown setpoint (factory set to what the pump consumes running at Minimum Speed with no flow) for longer than the airlock shutdown delay time. The pump/drive will be tagged as 'failed'. The alarm message will indicate which pump triggered the alarm.
7 Enter airlock shutdown delay time in the box beside the delay description.
8 The **Restore** button retrieves airlock setup values from the system factory defaults, only if needed.
9 Touch the buttons on the menu at the bottom to bring up the desired screen.

2.1.13 BAS SETUP

BAS SETUP

Protocol: Modbus
Address: 1
Baud Rate: 19200
Setup Modbus Baud Rate: 19200
Default Settings: RESTORE

MAIN MENU | SYSTEM OVERVIEW | SETUP

1 From **Level 1 Main Setup** toggle left or right to call up this screen.

2 Select the BAS Protocol (N/A, Modbus, LonWorks, Metasys, and Bacnet).

3 Enter the BAS address.

4 Enter the BAS Baud Rate.

5 The **Restore** button retrieves BAS setup values from the system factory defaults, only if needed.

6 Touch the buttons on the menu at the bottom to bring up the desired screen.

2.1.14 FIELDBUS SETUP

FIELDBUS SETUP

Source: Fbus2
Protocol: Modbus RTU
Baud Rate: 19200
Parity: No Parity
Stop Bit: 1
Pump Address: P1=1,P2=2,P3=3,P4=4,P5=5
FOR VIEWING ONLY

MAIN MENU | SYSTEM OVERVIEW | SETUP

This screen is for viewing only

1 From **Level 1 Main Setup** toggle left or right to call up this screen. The screen is for viewing only.

2 Touch the buttons on the menu at the bottom to bring up the desired screen.

2.1.15 CLOCK SETUP

CLOCK SETUP

Real Time Clock	Time HH:MM:SS	Date MM/DD/YYYY
HMI Time:	15 : 52 : 39	11 / 14 / 2017
PLC Time:	15 : 52 : 14	11 / 14 / 2017
Set PLC	0 : 0 : 00	0 / 0 / 20 0

MAIN MENU | SYSTEM OVERVIEW | SETUP

1 From **Level 1 Main Setup** toggle left or right to call up this screen to adjust the time in the HMI and display the time in the PLC.

2 The HMI time and date can be adjusted by pressing the individual hour, minute, second, month, day, and year box and entering the corresponding value.

3 Touch the buttons on the menu at the bottom to bring up the desired screen.

3.0   FACTORY SCREENS

Factory Screens include operation screens, alarm manage-
ment screens, and level 2 setup screens. To access level 2
setup screens a level 2 password is required.

3.1   OPERATION SCREENS

See above in the Operator Screens, section 1.1.

3.2   ALARM MANAGEMENT SCREENS

See previously in the Operator Screens, section 1.2.
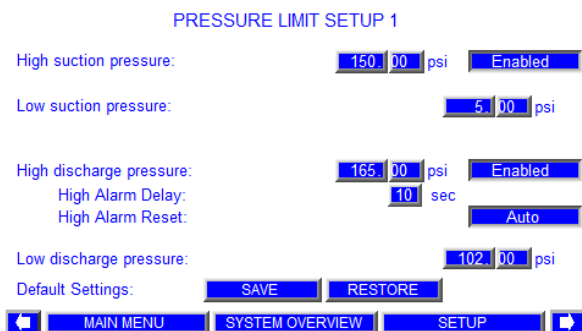

3.3   LEVEL 2 SETUP SCREENS

Most of the level 2 setup screens are almost the same as the
level 1 setup screens, except that the user can press **Save**
button to save changed values to the system factory de-
faults on each setup display screen. However, some different
screens are listed in the following table.

3.3.0   LEVEL 2 SETUP MENU

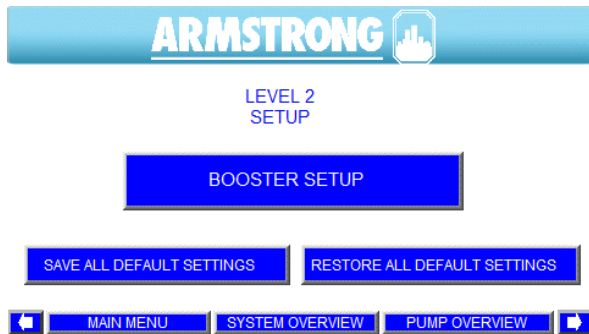

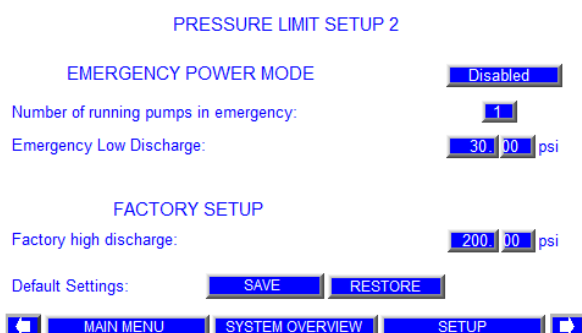

1 Pressing and inputting the proper password in **Level 0 Setup**
   screen will call up the Level 2 Setup screen.

2 The top left corner of the screen will flash **A** when there is a new
   alarm. The **A** will be solid when the alarm is acknowledged or
   muted. Pressing the **A** will call up the alarm screen.

3 Pressing the **Booster Setup** button will call up its the first Setup
   display.

4 Touching the **Right** and **Left** arrow will navigate between Level 2
   Setup Screens

5 After changing values in any setup screens, press **Save** button
   to save all the changes as system factory defaults. Important
   reminder: Step 5 must be executed after initial setup in order
   for the Restore function to work properly. Otherwise restore will
   setup all variables to improper values!!!

6 After changing values in any setup screens, should you want to
   go back to the factory default values, press the **Restore** button.

7 Below are the screens that the user sees when pressing on
   each of those buttons.

8 Touch the buttons on the menu at the bottom to bring up the
   desired screen.

3.3.1 PRESSURE LIMIT SETUP

PRESSURE LIMIT SETUP 1

High suction pressure:	150.00 psi	Enabled
Low suction pressure:	5.00 psi	
High discharge pressure:	165.00 psi	Enabled
High Alarm Delay:	10 sec	
High Alarm Reset:		Auto
Low discharge pressure:	102.00 psi	
Default Settings:	SAVE RESTORE	

◄ MAIN MENU | SYSTEM OVERVIEW | SETUP | ►

1 From **Level 2 Main Setup** toggle left or right to call up this screen.

2 Enter high suction pressure alarm/shutdown limit by pressing the left box beside the description. By pressing the right box, this function can be enabled or disabled.

3 Enter low suction pressure alarm/shutdown limit by pressing the box beside the description (Enter zero for disabling it).

4 Enter high discharge pressure alarm/shutdown limit by pressing the left box beside the description. By pressing the right box, this function can be enabled or disabled.

5 Enter the High Alarm Delay by pressing the left box beside it. If the High discharge pressure setpoint is exceeded for more than the High Alarm Delay time, a alarm is given.

6 High Alarm reset can be set in Auto or Manual Mode. In Auto mode, if at anytime, the pressure falls 5psi below the High discharge pressure setpoint, the alarm will be disabled. In Manual mode, the Alarm must be manually reset to restart the booster.

7 Enter low discharge pressure alarm/shutdown limit in normal mode by pressing the box beside the description(Enter zero for disabling it).

8 Press **Restore** button to retrieve pressure limit setup values from the system factory defaults.

9 Touch the buttons on the menu at the bottom to bring up the desired screen.

PRESSURE LIMIT SETUP 2

EMERGENCY POWER MODE	Disabled
Number of running pumps in emergency:	1
Emergency Low Discharge:	30.00 psi

FACTORY SETUP

Factory high discharge:	200.00 psi
Default Settings:	SAVE RESTORE

◄ MAIN MENU | SYSTEM OVERVIEW | SETUP | ►

1 From **Level 2 Main Setup** toggle left or right to call up this screen.

2 Emergency power mode can be enabled or disabled here by pressing the box beside the description. If it's enabled, when Emergency Power occurs, the **Number of running pumps in emergency** is designated to operate. The regular **Low discharge pressure** value will be disabled and the **Emergency Low Discharge** pressure value will apply

3 Enter the Number of Pumps in Emergency power mode. Default is 1

4 Enter low discharge pressure alarm/shutdown limit in emergency power mode by pressing the box beside the description.

5 Enter factory high discharge pressure alarm / shutdown limit.

6 Press Restore button to retrieve pressure limit setup values from the system factory defaults.

7 Touch the buttons on the menu at the bottom to bring up the desired screen.

3.3.2 PID SETUP

PID SETUP

Gain:	10	%/sec
Speed Up Limit:	1.0	%/sec
Speed Down Limit:	3.0	%/sec

POWER LIMIT SETUP **Disabled**

Motor Power Limit	103.0	%
Power Limit Speed Reduction	0.5	%/sec

PUMP ALARM AUTO RESET **Disabled**

Delay: 900 sec

Default Settings: SAVE RESTORE

◀ MAIN MENU SYSTEM OVERVIEW SETUP ▶

1. From **Level 2 Main Setup** toggle left or right to call up this screen.

2. Enter the proportional gain in the box beside the description. Increasing the Gain increases the reaction speed to discharge pressure changes. Decreasing the value slows down the reaction speed to a discharge pressure deviations from setpoint.

3. Enter the speed up limit in the box beside the description.

4. Enter the speed down limit in the box beside the description.

5. The ramp time in the PLC and the drives should always be 15 sec. That allows the actual ramp up time to be controlled by the PID Speed Up and Speed Down Limits. If the Speed Up Limit = 1.0% , Max Speed =100%, Min Speed=40% then the actual ramp up time = (Max Speed- Min Speed) /Speed Up Limit = 60 sec.

6. Example for PID parameters and speed relationship: If Disch Press deviation from setpoint = 15.0 PSI, Gain=10%/sec and Current speed=58.0%, then Updated Pumps Speed= Current speed + Disch Press deviation* Gain = 58.0% + 15.0 * 10/100 = 58.0% + 1.5% = 59.5% But the pumps acceleration rate is limited by the Speed Up Limit, so if the Speed Up Limit = 1% then the updated speed is 58.0% + minimum (1.0%, 1.5%) = 59.0% instead of 59.5%. The pump speed update is done once per second.

7. Power Limit Mode can be enabled or disabled here by pressing the box beside the description. Default is disabled. If it's enabled, when any Pump Motor Power is greater than the Motor Power limit setpoint, the booster auto speed is reduced for the Power Limit Speed Reduction Setpoint.

8. Enter the Motor Power Limit Setpoint. Default is 103 %.

9. Enter the Power Limit Speed Reduction Setpoint. Default is 0.5 %/sec.

10. Pump Alarm Auto Reset Mode can be enabled or disabled. Default is disabled. If it's enabled, when any Pump Drive has fault (except a communication fault) than only the Pump Drive effected will be reset after (default is 900 sec) adjustable delay time.

11. Enter the Pump Alarm Auto Reset Delay Time. Default is 900 sec.

12. Touch the buttons on the menu at the bottom to bring up the desired screen.

3.3.3 FIELDBUS SETUP

FIELDBUS SETUP

Source:	Fbus2
Protocol:	Modbus RTU
Baud Rate:	19200
Parity:	No Parity
Stop Bit:	1
Pump Address:	P1=1,P2=2,P3=3,P4=4,P5=5

Default Settings: SAVE RESTORE

◀ MAIN MENU SYSTEM OVERVIEW SETUP ▶

1. From **Level 2 Main Setup** toggle left or right to call up this screen.

2. Select the FieldBus card if the card exists. Default FieldBus connection is FBus2.

3. The factory default Protocol, Baud rate , Parity Mode and Stop Bit, and Pump Address are read only as displayed.

4. Press **Save** button to save changed values to the system factory defaults, press **Restore** button to retrieve setup value from the system factory defaults.

5. Touch the buttons on the menu at the bottom to bring up the desired screen.
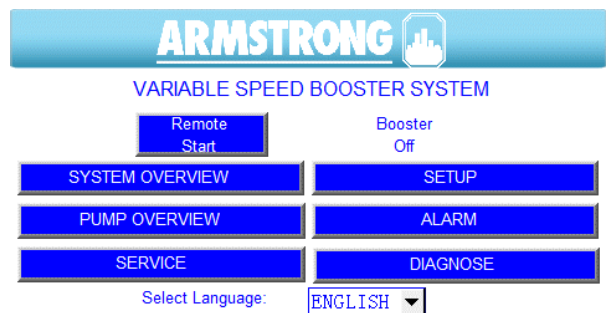

3.3.4 CLOCK SETUP

CLOCK SETUP

Real Time Clock	Time HH:MM:SS	Date MM/DD/YYYY
HMI Time:	15 : 44 : 45	11 / 14 / 2017
PLC Time:	15 : 44 : 20	11 / 14 / 20 17
Set PLC	0 : 0 : 00	0 / 0 / 20 0

MAIN MENU   SYSTEM OVERVIEW   SETUP

1 From **Level 2 Main Setup** toggle left or right to call up this screen to adjust the time in the HMI and the time in the PLC.

2 The HMI time and date can be adjusted by pressing the individual hour, minute, second, month, day, and year box and entering the corresponding value.

3 The system (PLC) time and date can be adjusted by pressing the individual hour, minute, month, day, and year box and entering the corresponding value.

4 Press **Set PLC** button to write the displayed time and date to the system.

5 Touch the buttons on the menu at the bottom to bring up the desired screen.

4.0 SYSTEM START-UP PROCEDURE

1 Ensure the power supply to the booster panel

2 Turn on the main power disconnect on the door of the booster panel

ARMSTRONG

VARIABLE SPEED BOOSTER SYSTEM

Remote Start   Booster Off
